

Applied Computer Programming
Mr. Neat

Song

Write a program that counts the number of occurrences of a given word in your favorite song. First create a file that has all the lyrics from your favorite song. Place that file in the same folder as your cpp program.

Write a program that asks the user for a word to search for in the lyrics. Write out to the screen the number of times that word occurs. Example output is given below:

What word to search for: love

The word love occurs 27 times in the song.
